Jakarta Barat, Indonesia

With a strong background as a software developer, I am now focusing on Artificial Intelligence (AI) and low code application development. Having contributed to and developed several AI-powered and low code solutions, I have shifted my expertise to become a low code developer. This transition is driven by the need for faster, more efficient, and cost-effective digital solutions. Leveraging AI and low code platforms allows me to accelerate workflows, reduce defects, and deliver high-quality results. In today's fast-paced environment, this approach is realistic, efficient, and aligns with the demands of modern businesses.

Work Experience

Akhari Tech & IT Consultant

Project Manager | January 2023 - Juni 2023 | Indonesia

- Led software project planning, execution, and delivery for client solutions.
- Coordinated between clients and development teams to ensure technical requirements and deadlines were met.
